SUMMARY

Backend engineer with 1.5 years of experience building production REST APIs and microservices in Node.js, TypeScript and NestJS. Also handles deployment and operations: Docker, Nginx, GitHub Actions CI/CD, Prometheus and Grafana monitoring, and a self-hosted transactional email service.

EXPERIENCE

Backend Engineer (SDE-1), The Regiment

May 2025 – Present

Mohali, Punjab

- Built modular REST APIs in Node.js, TypeScript and NestJS, and split core services into NestJS microservices communicating over TCP transport, reducing inter-service latency by ~25%.
- Implemented JWT authentication and role-based access control (RBAC) shared across multiple client apps, backed by PostgreSQL and MongoDB, with Redis caching for frequently read data.
- Built and maintain a self-hosted transactional email service (SMTP, SPF, DKIM, DMARC) with retry queues and structured logging, sustaining 95%+ deliverability.
- Containerized services with Docker behind Nginx on Linux VPS and set up GitHub Actions CI/CD (linting, tests, Docker image builds), cutting deploy time from ~45 minutes to under 10.
- Added Prometheus metrics and Grafana dashboards for API throughput and error rates, with alerting rules that flag production failures early.

PROJECTS

NovaGate – API Gateway

2026

Node.js, Redis, Nginx, Prometheus, Docker, JWT

Live: novagate.dev | Code: github.com/mayank-rawat98/novagate

- Reverse-proxy API gateway with per-client sliding-window rate limiting in Redis, JWT auth middleware and a Prometheus /metrics endpoint; deployed behind Nginx with TLS on a Linux VPS.
- Load-tested with autocannon: under 10 ms of added latency per proxied request at 500 requests/sec.

SquadUp – Collaborative Coding Platform

2025

Node.js, NestJS, PostgreSQL, Socket.IO, Redis

Live: squadup.in | Code: github.com/mayank-rawat98/squadup

- Real-time backend for live collaborative editing: Socket.IO for client connections, Redis pub/sub to fan out edits across server instances, and PostgreSQL for persistence.
- JWT auth with session management; load-tested at 1,000+ concurrent events with under 120 ms delivery.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, Bash

Backend: Node.js, NestJS, Express.js, REST APIs, WebSockets (Socket.IO), JWT, RBAC

Databases & Queues: PostgreSQL, MongoDB, MySQL, Redis, BullMQ

DevOps & Cloud: Docker, Nginx, Linux, GitHub Actions CI/CD, AWS (EC2, S3, RDS)

Monitoring: Prometheus, Grafana

Email & Security: SMTP, SPF, DKIM, DMARC, SSL/TLS

EDUCATION

B.Tech in Computer Engineering

2021 – 2025

J.C. Bose University of Science and Technology, YMCA, Faridabad, Haryana

ACTIVITIES

- Walmart Sparkathon:** Built the backend APIs and product-catalog integration for a social commerce prototype where influencers post outfit reels and users buy items through in-caption links.
